Bibliometric (Citation) Indicators

Most commonly used indicators

Most commonly used - journal impact indicators

WoS

Journal Impact Factor (JIF)

- Publication counting interval – 2 years
- Publication types (A and B) **are different**: A – all types, B – **only „citable documents“** (original and review articles)

$$\text{JIF} = \frac{\text{Citations in 2019 to items published in 2017 + 2018 (A)}}{\text{Number of citable items in 2017 + 2018 (B)}}$$

5-Year IF – publication counting interval – 5 years.

IF without Self-Cites – JIF **excluding self-citations** from the same journal.

Immediacy Index – indicates **how fast** an average publication in the particular journal **is being cited** since its publishing date.

Scopus

CiteScore

- Publication types (A and B) **coincide** (Original articles, reviews, conference publications, data sets and book chapters are included)
- Publication and citation counting interval – 4 years

CiteScore Track

- **Predicts an average citation rate** for the source during the **current year**.

Not suitable for direct comparison of sources from **different subject fields**

Journal position indicators

- Indicates the quality of a journal by its position in certain subject field.
- Calculated separately for all subject fields to which the journal is assigned.
- **Suitable** for direct comparison of sources from **different subject fields**.

Rank

- Journal's position by **JIF** value.

JIF Percentile

- **Percentage** of journal position.

Q (quartiles)

- **quartering** of journals by percentage of position.

Determined by journal's **JIF** value.

Rank

- Source's position by **CiteScore** value.

CiteScore percentile

- **Percentage** of journal position.

Quartiles

- **quartering** of journals by percentage of position.

Determined by source's **CiteScore** value.

Journal indicators normalized by discipline

Ratio of real and expected (potential) average number of citations to a single journal's publication within its represented subject field.

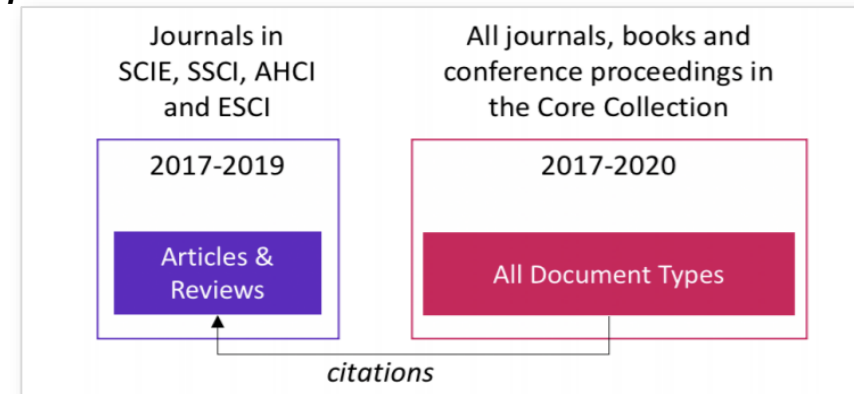

Suitable for direct comparison of sources from **different subject fields**.

Source Normalized Impact per Paper (SNIP)

- Delineation of disciplines do not depend on subject classification – subject field is determined individually for every journal.
- Differences in citation densities between disciplines are accounted for.
- Calculated from original and review articles, as well as conference material published during preceding **3 years**.
- **1** is a value for an **average journal**.

Journal Citation Indicator (JCI)

- It is a derivative indicator based on *Category Normalized Citation Impact* indicator.

- It is normalized by disciplines in accordance with *WoS Category Classification*.
- Calculated and applicable for all *WoS Core Collection* journals (including ones indexed in ESCI and A&HCI)

Journal prestige indicators

- Calculations are based on the journal citation networks.
- Citations from a higher quality journals carry higher value.

Eigenfactor Score

- **Citations** are calculated from the indicated year
- Interval for **cited publications** – **5 years**
- Composed in a way, that the sum of Eigenfactor for all JCR indexed journals would be **100**: value of 1 indicates that the journal accumulated 1% of overall influence.
- **Journal self-citations** are not included (neglected).

Article Influence Score

- An **average influence** of journal's publication, accumulated within **5 years** after its publishing.
- Calculated by multiplying **Eigenfactor Score** by 0.01 and dividing by the number of publications in the journal.

SCImago Journal Rank (SJR)

- **Citations** are calculated from the indicated year
- Interval for **cited publications** – **3 years**
- **Journal self-citations** are limited (up to 33%)
- **Journal size** is accounted for.
- **Thematic closeness** of journals is accounted for.

***AIS** and **SJR** are suitable for direct comparison of sources from **different subject fields**.
(1 is a value for an **average journal**)*

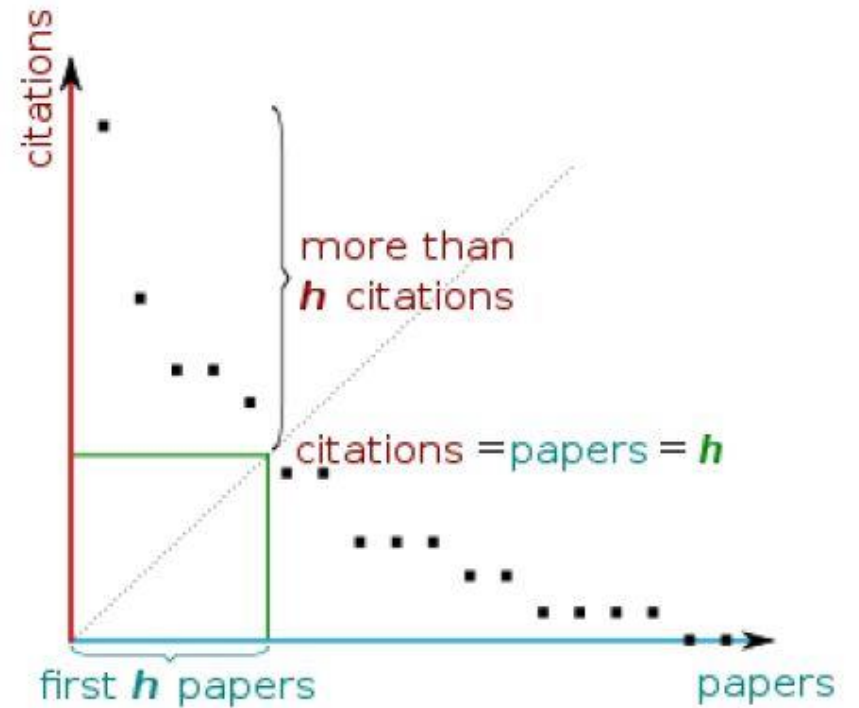

H-index

➤ Indicates the **number of publications h** , which have been **cited h** (or more) times.

Advantages:

- Evaluates both quantity and quality of publications.
- Simple calculation.
- May be applied for evaluating not only authors, but also journals, institutions or any other publication sets.

Limitations:

- Focusses only on the most cited publications.
- Unfavorable to young researchers and new journals.
- Not normalized by disciplines.

Availability of bibliometric indicators : WoS

All **WoS** indicators:

- Calculated only for journals included in **Journal Citation Reports (JCR)** (indexed in *Science Citation Index Expanded (SCIE)* and *Social Sciences Citation Index (SSCI)*):
 - Journals indexed in *Arts & Humanities Citation Index (A&HCI)* and *Emerging Sciences Citation Index (ESCI)* do not have main WoS journal impact indicators (except for JCI);
 - Citation impact indicators are not calculated for other type of sources (books, conference proceedings, etc.).

Q – the only one journal position indicator available in WoS without access to JCR.

The screenshot displays the Web of Science interface. At the top, the Clarivate logo is on the left, and 'English' and 'Products' are on the right. Below the logo, the 'Web of Science' title is followed by navigation links: 'Search', 'Marked List 9', 'History', and 'Alerts'. A large purple banner in the center contains the text 'Discover multidisciplinary content from the world's most trusted global citation database.' Below this banner is a search bar with the text 'Search in: Web of Science Core Collection'. At the bottom, there are tabs for 'DOCUMENTS', 'AUTHORS', 'CITED REFERENCES', and 'STRUCTURE'. On the right side, a dropdown menu is open, listing various products: 'Web of Science', 'Web of Science (Classic)', 'Master Journal List', 'Publons', 'InCites', 'Journal Citation Reports™', 'Essential Science Indicators', 'Reference Manager', 'EndNote', and 'EndNote Click'. The 'Master Journal List' and 'Journal Citation Reports™' items are highlighted with blue boxes.

Availability of bibliometric indicators: Scopus

- Calculated and provided for **all types** of **periodical sources** (journals, conference proceedings, book series, trade publications)
- **Freely available** (subscription to the database is not required):
 - ✓ Direct preview in Scopus **Sources** section
 - ✓ Availability to **download** lists of indexed sources with the values of citations, indicators and additional information.

IMPORTANT – indicators limitations

All indicators provided in bibliographic databases are **calculated only from the content** (publications and citations) **indexed** in that database.

WoS indicators are calculated from:

- Citations – from WoS Core Collection;
- H-indexes – from the data available by the certain subscription terms (LT – content from 1990m.)

Scopus indicators:

- ✓ calculated **from all indexed data**

Journal citation impact indicators should not be applied for evaluation of the quality of **individual publications**.
